The Kentucky Children’s Hospital encompasses a multispecialty system, offering a comprehensive range of services for the treatment of all diseases and disabilities in infants, children and adolescents. The hospital’s scope of service includes neonatal intensive care, pediatric intensive care, and general medical and surgical beds for children. Additionally, outreach clinics in most pediatric subspecialties are located throughout the region. For complete information on our range of services and special programs, please visit our website.

**Twilight Children’s Clinic**

The Twilight Children’s Clinic is located in the Kentucky Clinic and is open 5 – 9 p.m. Monday – Friday and from noon – 5 p.m. Saturday and Sunday for phone-in patients. We are open on all holidays except Thanksgiving Day and Christmas Day.

**Medical Director:** Carol Steltenkamp, MD, Division of General Academic Pediatrics. Call 859-257-6730.

**Kentucky Children’s Hospital Transport Service**

Kentucky Children’s Hospital Transport Service is available 24 hours a day, 365 days a year to provide safe and rapid access for critically ill infants and children to services at our children’s hospital. We specialize in the transport of neonates, infants and children of all sizes and ages. Recently, we added a second pediatric transport team during peak hours to expedite transports. Contact UK•MDs at 800-888-5533 to arrange transportation.

**Medical Director, Pediatric Transport:** Matthew K. Bacon, MD, Division of Pediatric Critical Care

**Medical Director, Neonatal Transport:** Aparna Patra, MD, Division of Neonatology

Chief

Kentucky Children’s Hospital, Adolescent Medicine and Young Parents Program is a Primary Care Practice which specializes in adolescent medicine. We treat young people ages 10 – 21. Our team of physicians, nurses, social workers, nutritionists and psychologists provides comprehensive care for eating disorders, behavioral issues, obesity, substance abuse-related problems, sexual abuse/rape evaluation and treatment, ADHD, and more.

SPECIALTIES

• Counseling and treatment
  - Attention deficit disorders
  - Behavioral problems
  - Childhood abuse, including sexual abuse
  - Depression
  - Eating disorders
  - Fitness
  - Learning disorders
  - Nutrition
  - Substance abuse
• Management of diabetes, asthma and other chronic illnesses
• Physical exams for camp, sports and employment
• Teens at risk

Gynecologic Care

Our gynecologic care counsels and encourages teens to maintain a healthy lifestyle, avoiding risky behaviors and postponing sexual activity. Some of the services we provide include:
• Colposcopy
• Pap smears
• Pregnancy tests
• Reproductive care
• Routine health care
• Sick visits during clinic hours
• Well-baby checks

Young Parents Program

This program was created to provide comprehensive care focusing on the special needs of young parents and their children. We know that young parents face special challenges, so we have created this clinic to care for both the young parent and their children at the same appointment, saving time and money.
• Child-rearing guidance
• Counseling services to help with the stresses of caring for a child
• Gynecologic care
• Weight management

DOUGLAS J. SCHNEIDER, MD
Chief, Division of Pediatric Cardiology
Medical Director, Congenital Heart Clinic

The Congenital Heart Clinic uses state-of-the-art technology and techniques to diagnose and evaluate a child’s heart condition and develop the most advanced treatment plan possible. The focus of the entire team of specialists is on healing the child’s heart.

The Congenital Heart Clinic provides both inpatient and outpatient diagnostic and treatment services for children with suspected or diagnosed congenital heart disease. The initial workup includes the evaluation of heart murmurs, chest pain, syncope and other symptoms that may be attributed to the cardiovascular system. Diagnosis and treatment of congenital malformations of the heart, defects acquired from rheumatic fever or infection, cardiac arrhythmias and acquired myocardial disease are emphasized. To meet the needs of the referring community, we have established pediatric cardiology outreach clinics throughout the region.

SPECIALTIES
• Arrhythmia detection (holter, event recorders)
• Cardiac catheterization and interventions
• Congenital and acquired heart disease
• Electrocardiography
• Exercise stress testing
• Fetal-perinatal cardiology
• Invasive electrophysiological study and ablation of abnormal electrical pathways
• Non-invasive procedures including echocardiography (transthoracic, transesophageal, fetal)
• Pacemaker clinic
• Rhythm disturbances

Non-Surgical Treatments
Whenever possible, we treat children without surgery. Thanks to dramatic advances in the treatment of heart disease and conditions, we are able to offer a wide range of non-surgical and/or minimally invasive options:

- Cardiac catheterization
- Echocardiography
- Electrophysiology (pacemakers)

Pacemaker Clinic
Each arrhythmia requires special treatment. At the Pacemaker Clinic, our team evaluates and treats each child’s arrhythmia with the most advanced medicine available, including electrophysiology.

PHYSICIANS
Kristopher Cumbermack, MD
Joshua M. Hayman, MD

For current information, visit ukhealthcare.uky.edu
If a child has a life-threatening acute illness or organ failure, our pediatric intensive care team goes into action. Working in the state-of-the-art Heinrich A. Werner, MD, Division of Pediatric Critical Care Medicine (PICU), our team treats and monitors critically ill children (newborns to 18 years) for a range of problems, everything from burns to trauma injuries and cardiovascular surgery to neurosurgery. The critical care team specializes in stabilizing critically ill children after surgery or serious injury and illness, so they can get back to the important work of healing. Once their condition is stable, patients return to the care of their primary care team.

**Neonatal/Pediatric Emergency Transport**

Kentucky Kids Crew is a specialty team that provides inter-facility (hospital-to-hospital) critical care transportation for both neonatal and pediatric patients. We are the only transport team in the region exclusively dedicated to transporting newborns and children. Our team is directed by neonatologists and pediatric intensivists, and includes critical care nurses trained in advanced procedures, in addition to emergency medical technicians who drive the ambulances. Our dedicated transport team is on duty 24/7, ready to be mobilized immediately when a referring facility calls UK•MDs at 800-888-5533 to arrange transportation.

**Medical Director, Pediatric Transport:** Matthew K. Bacon, MD, Division of Pediatric Critical Care

**Medical Director, Neonatal Transport:** Aparna Patra, MD, Division of Neonatology

**SPECIALTIES**

Interim Chief

Pediatric Dentistry at Kentucky Children’s Hospital provides consultation and comprehensive care for all levels of oral/dental needs for infants, children and adolescents. Service is available for the compromised or normal healthy patient.

**Twilight Dental Clinic for Kids**

The Twilight Dental Clinic for Kids offers affordable, convenient after-work or after-school evening appointments for children age 4 - 10. Children visiting this clinic will be seen by a student dentist who is nearing the completion of four years of training beyond a college education. The student dentist works under the close supervision of board-certified specialists in pediatric dentistry.

Patient appointments, call 859-323-6525.

**SPECIALTIES**

- Complex dental conditions in children
- Conscious sedation and general anesthesia
- Dental care for young patients with severe medical problems or severe mental problems
- Preventive and interceptive orthodontics

DANIEL W. LARROW, MD
Chief

The faculty of the Division of Developmental and Behavioral Pediatrics is board-certified in developmental-behavioral pediatrics. Every child is thoroughly evaluated before a comprehensive treatment plan is developed. Treatment can involve medication, psychotherapy, family therapy and/or direction for educational treatments within the child’s school. Our physicians provide for the evaluation and follow-up care at Kentucky Clinic for children from birth to 18 years of age with a variety of developmental, learning and behavioral problems.

Developmental Disabilities Clinic

Some of the behavioral and psychological problems we treat are:

- Attention deficit hyperactivity disorder
- Autism spectrum disorders
- Behavioral and school difficulties
- Emotional problems related to medical conditions
- Enuresis and encopresis
- Feeding disorders
- Learning disabilities
- Motor disorders
- Neurodevelopmental disorders
- Tourette’s syndrome

EMERGENCY MEDICINE

LANDON A. JONES, MD
Medical Director

Kentucky Children’s Hospital’s Pediatric Emergency Medicine is dedicated to the care and treatment of pediatric emergencies. The Makenna David Pediatric Emergency Center is one of the only dedicated children’s emergency centers in the state and the only one serving Central and Eastern Kentucky. Children need specialists and equipment designed to care for their unique needs and all of the emergency medicine physicians working in the pediatric emergency center are board certified in emergency medicine. The Makenna David Pediatric Emergency Center has been verified as a Pediatric Level 1 Trauma Center by the American College of Surgeons Committee on Trauma.

Advanced Technology in Use

• Digital radiographic (X-ray) and computerized tomography (CT) capabilities are available 24 hours a day
• Ultrasound services performed at bedside or in the ED ultrasound room
• Interventional radiology, magnetic resonance imaging (MRI) and nuclear medicine patients will receive radiology services in the following facilities as appropriate: UK Chandler Hospital (Pavilion H), Critical Care Tower (Pavilion HA) and Gill Building (Pavilion G).

Makenna David Pediatric Emergency Center

On July 14, 2010, the University of Kentucky reaffirmed its commitment to children across the Commonwealth by opening the doors to the state-of-the-art Makenna David Pediatric Emergency Center. The center offers all the advantages of our world-class emergency department.

• Separate entrance for pediatric patients
• Waiting area with play table, interactive wall and computer play station
• Separate area for those who prefer a quiet environment
• Exam rooms with smaller beds, child-friendly decor and a TV that can be used for patient education or entertainment
• 10 standard exam rooms, two high-acuity “crisis” rooms and two triage rooms
• Private consultation rooms for families in special circumstances
• Proximity to the UK Level 1 Trauma Center, the only one in the state verified by the American College of Surgeons for pediatric trauma patients
• Wi-Fi in waiting areas
• Direct access to nearby radiology for efficient diagnostic evaluation
• 24/7 support of the full range of pediatric specialists associated with Kentucky Children’s Hospital
• Rooms with full-service capability of medical gases, exam light and monitoring
• Crisis rooms with ICU booms and increased monitoring capability
ENDOCRINOLOGY

W. JACKSON SMITH, MD
Chief

The Division of Pediatric Endocrinology conducts the study and treatment of diseases of the endocrine system in children, including growth problems, bone pubertal development, thyroid disorders and diabetes. Since these diseases can affect the lives of the entire family, counselors and specialists are also a part of a team that helps children and families deal with every aspect of the disease.

SPECIALTIES
- Adrenal gland disorders
- Diabetes mellitus
- Growth disorders
- Hypopituitarism
- Problems of calcium metabolism
- Thyroid disorders

PHYSICIANS
John L. Fowlkes, MD
Evangelia Kalaitzoglou, MD
Alba E. Morales Pozzo, MD

For current information, visit ukhealthcare.uky.edu
The Division of Forensic Pediatrics offers assessment and treatment for pediatric and adolescent patients with concern for possible child maltreatment. Our goal is to identify and prevent child abuse as well as assist in identifying conditions that may mimic child abuse. Services include consultation and follow-up evaluations.

In addition to diagnosis and treatment, we are committed to working with community partners including Kosair Charities. The Kosair Charities Face It® Movement works to end child abuse through prevention strategies, community engagement and promoting effective policies to improve the safety of children. We also work with the Children’s Advocacy Center of the Bluegrass in providing medical assessments to victims of alleged sexual abuse.

Consultation includes medical expertise on the recommended evaluation, diagnosis, documentation and follow-up of suspected cases of child physical and sexual abuse. It can also assist in ensuring appropriate and timely work-up as well as assist in collaborative investigations with law enforcement and the Department for Community Based Services.
GEORGE J. FUCHS III, MD

Chief

The Division of Pediatric Gastroenterology, Hepatology, and Nutrition offers assessment and treatment for pediatric and adolescent patients with gastrointestinal and liver disease. State-of-the-art diagnostic and procedural services include consultation and follow-up evaluation.

SPECIALTIES

- Diseases of the gastrointestinal tract in children and adolescents, including constipation and functional gastrointestinal disease
- Diseases of the liver, including newborn liver disease, acute and chronic hepatitis
- Emergency services and evaluation for gastrointestinal bleeding and foreign body ingestion
- Gastroesophageal reflux
- Inflammatory bowel disease
- Young Adult Clinic

- James W. Van Buren, MD
- Carmel Wallace Jr., MD, FAAP
The Complex Care Clinic (previously the Medical Home for Coordinated Pediatrics) provides primary medical care for children in foster care and children with special health care needs. Our mission is to work with children and families to ensure that the child receives high-quality, comprehensive, coordinated, compassionate health care. Our physicians and staff work together with families to identify and access all the medical and nonmedical services needed to help the child and family achieve maximum potential. We facilitate and monitor all referrals to specialists, including mental health services, as indicated for the individual child.

**SPECIALTIES**

- Acute and chronic illnesses
- Care coordination
- Foster care mandated 48 hour intake exams and ongoing management
- Immunizations
- Routine checkups
- School physicals

The Pediatric High Body Mass Index (BMI) Clinic provides care for children and adolescents, ages 2 to 18, who are overweight/obese (i.e. with BMI’s above the 85th percentile). Patients must be referred by their primary care physician.

Each patient completes an extensive initial evaluation including a comprehensive physical exam, a detailed family, dietary and activity history as well as screening for co-morbidities associated with obesity.

Clinic staff will coordinate arrangements for subspecialty clinic services as needed and communicate with the referring primary care physician. Since we are not a weight management clinic, we collaborate closely with public health departments in Kentucky to identify and refer all patients and their families to local resources for lifestyle modification interventions, especially those related to nutrition and physical activity.

The Adolescent Medicine Obesity Clinic also provides body mass index evaluations for adolescents who are overweight or obese.
SHAWN M. TAYLOR, MD, FAAP

Director

Each year thousands of infants and children from other countries are adopted by American families. The International Adoption Clinic at Kentucky Children’s Hospital helps families before, during and after their adoption. When the adoption referral is received from the adoption agency, our physician will review the available information, offer medical opinion on the health and medical risks of the child, and be available to families when they travel. After the child arrives in the United States, we offer a comprehensive medical exam, including a physical examination, growth and development assessments by an occupational or physical therapist, labs, and appropriate referrals, if needed. At the 6 month post-adoption referral, in addition to the physical examination and labs, we also complete a hearing and speech evaluation.

R. STEPHEN S. AMATO, MD, PhD

Chief

The Division of Pediatric Genetics and Metabolism works with patients and their families to diagnose a wide range of genetic disorders and counsel them on treatment and/or management options. We also work with expectant mothers to test for potentially life-threatening diseases in the womb.
The Division of Gynecologic Subspecialties offers pediatric and adolescent gynecologic services. Teens and children have unique gynecologic needs. That's why we have doctors who are specially trained to care for our younger patients. With exams and procedures specifically designed for pediatric and adolescent patients, we provide care and comfort for patients ranging from newborns to age 21, with a focus on teen health.
HEMATOLOGY AND ONCOLOGY

LARS M. WAGNER, MD
Chief

The DanceBlue Kentucky Children’s Hospital Hematology/Oncology Clinic provides diagnosis of and treatment for childhood hematologic and immunologic disorders and malignancies. The faculty, with expertise in the management of childhood leukemias and solid tumors, actively participates in treatment protocols of the Children’s Oncology Group, the national pediatric clinical oncology cooperative group sponsored by the National Cancer Institute. The division also offers patients’ families a comprehensive program of support services that is directed by a psychiatrist trained in both adult and child psychiatry.

Children with blood disorders and cancers are treated with the most advanced medicine by our team of specialists in hematologic and oncology. We take a team approach to your patient’s care including board-certified pediatric hematologist-oncologists, pharmacists, social workers, and certified pediatric oncology nurses. We offer complete and compassionate care to kids with blood disorders and diseases, right here in Kentucky.

SPECIALTIES

The UK HealthCare Hemophilia Treatment Center (UKHTC) is a comprehensive care center for adults and children with congenital bleeding disorders. It is a federally-funded center recognized for having multidisciplinary providers who have specialized knowledge in this unique sub-specialty.

It is important for pediatric cancer patients five years off of treatment to receive long-term follow-up care to control and maintain any adverse effects from chemotherapy, radiation and surgeries. The potential long-term effects vary depending on age diagnosed and therapy used.

Effects from therapy can include:

- Infertility
- Loss of energy
- Organ failure
- Weight gain

At the Long-Term Follow-Up Clinic, Dr. Sherry Bayliff offers comprehensive health evaluations, recommendations and health resources to ensure your patient’s health is maintained throughout the years. The initial consult is a full day of testing and review. Thereafter, an annual appointment is recommended.

If a physician determines that a child needs to stay at Kentucky Children’s Hospital for the specialized care that only our pediatric teams can provide, our hospitalists in Division of Hospital Pediatrics will work with the family to coordinate the very best, most advanced care for each child. A hospitalist works with the primary care physician and specialists at Kentucky Children’s to make sure that each child gets exactly the care that is right for him or her. Available at all times, our hospitalists work to ensure that each child gets compassionate treatment that is sensitive to each family’s needs and beliefs. The hospitalist’s care does not stop at the hospital lobby. They will work with the primary care doctor to ensure that each family has all the equipment, professional assistance and education they need to continue care for the child at home.

INFECTION DISEASES

ROBERT A. BROUGHTON, MD
Chief

The Division of Pediatric Infectious Diseases is involved in the diagnosis and management of infants, children and adolescents with acute and chronic infectious diseases. Division faculty members accept referrals of patients from primary care providers and other physicians with challenging infectious disease problems or conditions in which an infectious disease is under consideration.

SPECIALTIES
• Bone and joint infections
• Congenital and other perinatally acquired infections
• Endocarditis
• Fever of unknown origin
• Fungal infections
• Histoplasmosis
• Infections in immunocompromised children
• Kawasaki disease
• Lymphadenitis
• Meningitis
• Other bacterial infections

• Pneumonia
• Recurrent fevers
• Recurrent infections
• Skin and soft tissue infections, including infection caused by MRSA
• Tick and other insect-transmitted infections
• Tuberculosis
• Viral infections

The Kentucky Children's Hospital NICU Graduate Clinic provides specialized medical and developmental follow-up care for babies and young children until about 3 years of age. The clinic not only serves babies who were cared for in the Kentucky Children's Hospital Neonatal Intensive Care Unit (NICU), but also children born prematurely who are at risk for developmental problems.

Developmental follow-up is tailored to meet the needs of each individual child. Each child is evaluated by a multidisciplinary team that may include a physician, a nurse, a dietitian, a physical therapist, a speech-language pathologist, a clinical psychologist and a social worker. A complete medical history is taken and a physical examination is completed at most visits.

Specific developmental testing varies with the child’s specific needs and his or her adjusted age, which accounts for premature birth. For example, a 6-month-old who was born three months prematurely has an adjusted age of 3 months.

At 3 months adjusted age, some babies undergo developmental screening. Formal developmental testing is usually completed at adjusted ages 6 months, 12 months and 24 months.

The medical follow-up we provide at the NICU Graduate Clinic is primarily focused on problems associated with high-risk deliveries or NICU stays. This care is intended to complement, not take the place of, the services provided by the child’s primary care provider. This medical care includes management and/or follow-up of feeding problems and breathing problems, such as those requiring home oxygen or monitors.
The Division of Pediatric Nephrology provides diagnosis, treatment and management of childhood renal diseases. These conditions include kidney infections, inherited diseases involving the kidneys, acute and chronic kidney failure, inflammatory diseases, and protein or blood in the urine. Specialists give families the support they need to deal with the long-term effects of what can be a chronic, life-changing disease.

**SPECIALTIES**

- Acute and chronic renal failure
- Congenital abnormalities of the kidney
- Cystic kidney disease
- Glomerulonephritis
- Hematuria
- Hemolytic uremic syndrome
- Hypertension
- Kidney stones
- Kidney transplant management
- Nephrotic syndrome
- Proteinuria
- Renal osteodystrophy
- Transplant Clinical Service
- Urinary tract infections
- Vesicoureteral reflux

KENTUCKY CHILDREN’S HOSPITAL – PEDIATRICS

NEUROLOGY – CHILD

ROBERT J. BAUMANN, MD
Chief

A child’s neurological system includes the brain and nervous system. It’s the command center that connects the body’s different parts to each and allows them to work together properly. When there are problems in the neurological system, specialists from our child neurology team will work with the primary care team to diagnose and treat the problem with the most advanced, state-of-the-art care available.

If a child requires inpatient or observation monitoring or procedures, they will receive care at our facilities in the Kentucky Children’s Hospital. There we can use MRI, video EEG monitoring or other special tests to diagnose the child and determine treatment. Our specialists also visit the Appalachian counties of Eastern Kentucky where clinics are held in conjunction with the Commission for Children with Special Health Care Needs (CCSHCN) to make sure every child with a neurological disorder receives the treatment they need.

SPECIALTIES
• Cerebral palsy
• Developmental disorders
• Epilepsy
• Headaches
• Muscle weakness (myopathy)
• Neuromuscular disorders
• Seizures
• Speech dysfunction (congenital aphasia)
• Tics

The section of Pediatric Orthopaedic Surgery and Sports Medicine is world renowned for developing and implementing state-of-the-art techniques to diagnose, treat, research and educate patients about bone and joint disorders. It is our goal to provide the highest level of care available so that we may return our patients to their daily activities as quickly as possible. For a complete listing of faculty, services and locations refer to the Department of Orthopaedic Surgery and Sports Medicine section of this directory.

SPECIALTIES
- Arthritis
- Arthroscopic surgery
- Back pain
- Brachial plexus surgery
- Cartilage repair, restoration and transplantation
- Cerebral palsy
- Cervical disc disease
- Clubfoot
- Complex foot and ankle surgery
- Comprehensive bone and soft tissue tumor treatment
- Congenital anomalies
- Dislocations
- Elbow surgery
- Fractures
- Growth disturbance
- Hand surgery
- Hip arthroscopies and surface replacement
- Knee surgery
- Limb deformities
- Malformations
- Marrow stimulation techniques
- Meniscal repairs
- Neck pain
- Neoplasms
- Neuromuscular disorders
- Reconstructive surgery
- Scoliosis
- Shoulder surgery
- Spina bifida
- Spinal disc disease
- Sports medicine
- Total joint replacement
- Total joint revision
- Trauma
- Wrist surgery

Delivering expert pediatric orthopaedic care to children from Kentucky and the surrounding states has been the mission of the Lexington Shriners Hospital for over 90 years. With a network of 22 hospitals and specialty care centers throughout the US, Canada, and Mexico we are changing lives every day through innovative pediatric specialty care, world-class research and outstanding medical education.

In April 2017, Shriners Hospital will become Shriners Hospitals for Children® Medical Center—Lexington when we move to the UK HealthCare Campus. This is not a merger or purchase by UK, but an opportunity to create a new state-of-the-art environment that better fits how we deliver care. Shriners Hospital Lexington has had an affiliation agreement with UK for many years—the pediatric orthopaedic specialists who serve as the core staff for Shriners are also staff and faculty at UK. Being on the UK HealthCare campus brings together the pediatric orthopedic expertise we are known for with the top-rated specialty and sub-specialty care of UK HealthCare—a real benefit to children with complex conditions.

The new Shriners Hospitals for Children® Medical Center—Lexington, located directly across from the UK Albert B. Chandler Hospital/Kentucky Children’s Hospital, is slated to open in April 2017. Specialty care will include physician office visits and diagnostics, the first EOS low dose imaging system in Kentucky, pediatric orthotic and prosthetic services, care coordination by certified case managers, the Shriners Hospitals for Children® Ambulatory Surgery Center, and the Shriners Hospitals for Children® Rehabilitation Clinic.

SPECIALTIES

- Clubfoot and other foot disorders
- Hand and upper-extremity disorders
- Infantile and adolescent hip disorders
- Limb deficiencies and amputation
- Orthopaedic conditions related to:
  - Cerebral palsy
  - Congenital and developmental disorders
- Metabolic bone disease
- Neuromuscular disorders
- Osteogenesis Imperfecta
- Spina bifida
- Rheumatology
- Scoliosis and other spinal deformities
- Skeletal growth abnormalities
- Sports injuries
RALEIGH O. JONES JR., MD
Chair

Specialists from Pediatric Otolaryngology, Head and Neck Surgery address all facets of the medical and surgical care of the ear, nose and throat region, including:

- Airway problems
- Hearing loss
- Neck masses
- Recurrent ear infections
- Sinus disease
- Sleep apnea
- Tonsillitis
- Treatment of major trauma and injuries of the head and neck

SPECIALTIES
- Airway reconstruction
- Cosmetic facial plastic surgery
- Cranial base disorders and surgery
- Craniofacial surgery
- Evaluation of voice disorders
- Head and neck oncology
- Hearing disorders including devices and implants
- Laser surgery
- Maxillofacial injuries
- Middle-ear surgery
- Pediatric airway disorders
- Reconstruction of head and neck defects
- Salivary gland disorders
- Sleep apnea
- Sinus disease and allergy
- Tracheostomy

SERVICES

The faculty of the Division of Child and Adolescent Psychiatry provides a full range of clinical services. The division’s multidisciplinary faculty is active in a variety of clinical and research interests in biological psychiatry, pharmacotherapy and behavior therapy, including cognitive therapy.

**Inpatient Clinic**

UK HealthCare Good Samaritan Inpatient Adolescent Psychiatry offers short-term care services to assist adolescents who are experiencing emotional, psychological and behavioral problems. The unit provides mental health services for male and female adolescents from ages 12 – 17. We offer gender specific semiprivate rooms located on a small, self-contained, locked unit, allowing for individualized attention. Our treatment team is interdisciplinary and focuses on individual, group and family therapy. Inquiries and referrals are handled by the intake staff. Referrals may be made by parents, outpatient providers, school officials or other concerned members of the community.

**Care for Adolescents:**
- Aggressive behavior
- Anxiety
- Depression
- Eating disorders
- Grief/trauma
- Oppositional behavior
- Psychotic symptoms
- Substance abuse
- Thoughts of harm to self or others

**Treatment Team:**
- Psychiatrists with biomedical and psychodynamic training
- Psychologists
- Nurses
- Clinical social workers
- Therapists
- Recreational therapists
- Educators

**Physicians**

Krishna K. Pancham, MD
Because cystic fibrosis (CF) is a life-shortening genetic disorder for which there is currently no cure, it is very important that care is provided by an accredited CF center. Proper treatment and care can influence a patient’s life expectancy far beyond the average age of 37 years. Our Cystic Fibrosis Clinic is accredited by the Cystic Fibrosis Foundation.

Our multidisciplinary team is made up of:

- Adult and pediatric pulmonologist with special training in cystic fibrosis
- Respiratory therapist
- Adult nurse coordinator
- Pediatric nurse coordinator
- Dietitian
- Licensed clinical social worker
- Doctor of Pharmacy

The team works closely with other pediatric and adult specialists including gastroenterologists, endocrinologists, otolaryngologists, psychiatrists, geneticists and surgeons.

We have an active lung transplant program. Transplant services and opportunities to participate in clinical trials are additional options available to our CF patients.

The specially trained physicians in the Pediatric Pulmonary Function and Sleep Laboratory at Good Samaritan Hospital are able to diagnose and manage most sleep disorders in children 18 months and older, including those with physical challenges. We offer clinical evaluation for problems related to daytime sleepiness, disturbed sleep and interruptions in breathing during sleep. If indicated by a referring physician, sleep studies can be undertaken for sleep-related breathing disorders and sleep apnea.

Our pulmonary and sleep specialists will analyze test results and work with your child’s physician in making a diagnosis and recommendations for treatment.

Hours of operation/technical staff available: Monday – Saturday, 8 p.m. – 6 a.m.

Business office hours: Monday – Friday, 8 a.m. – 4:30 p.m.

At Kentucky Children’s Hospital the Division of Pediatric Surgery provides expertise in all pediatric surgical services. We have assembled a highly skilled team of surgical specialists to care for children from the tiniest neonates and infants, all the way up to school age children and adolescents.

Our team of fellowship trained surgeons provides expertise in general pediatric surgery as well as all pediatric subspecialty surgical areas. Our care includes congenital heart surgery, kidney transplantation, urology, thoracic surgery, advanced minimally invasive surgery, neonatal surgery, ophthalmology, cancer surgery and plastic surgery.

Dedicated specialties and facilities unique to Kentucky Children’s Hospital include the region’s only pediatric intensive care unit, a Level IV neonatal intensive care unit, a Level I pediatric trauma center, the Makenna David Pediatric Emergency Center, a burn center and the only hospital in the region with pediatric anesthesiologists to manage the most challenging operative cases.

Our pediatric medical specialists, nursing staff, child-life specialists, psychologists and behavior therapists complete a team dedicated to providing comprehensive care for children.

SPECIALTIES

- Cardiothoracic
- General and Thoracic
- Kidney Transplant
- Neurosurgery
- Obstetrics and Gynecology
- Ophthalmology
- Oral and Maxillofacial
- Orthopaedics
- Otolaryngology, Head and Neck
- Plastic Surgery

JAMES A. QUINTESSENZA, MD
Chief
UK-CCHMC Joint Pediatric Heart Care Program
Kentucky Children’s Hospital (KCH) and Cincinnati Children's Heart Institute are working together to provide advanced pediatric heart care close to home for patients in Kentucky. Our joint program is an integrated collaboration providing the full spectrum of high-quality heart care—from assessment and diagnosis, to complex surgery and postsurgical care along with joint quality and safety conferences. Before care is provided, your referred patient’s case is jointly conferenced and then performed at the location most appropriate for the patient and family.

We care for patients ranging in age from newborns to adolescents and adults with congenital heart disease. A pediatric heart surgeon is based in Lexington at Kentucky Children's Hospital with a dual appointment at Cincinnati Children's. The program will also have onsite electrophysiologists, dedicated pediatric anesthesiologists, perfusionists and pediatric advanced practice providers.

The goal of our program is to keep patient care local and close to home when clinically appropriate. Pediatric cardiology subspecialty care as well as postsurgical care and other follow-up services, are available for all patients of the joint heart care program at KCH.

SPECIALTIES
- Advanced cardiac imaging
- Cardiac catheterization
- Congenital heart disease care for pediatric and adult patients
- Echocardiography
- Electrophysiologists specializing in heart rhythm disorders
- Heart rhythm management
- In-utero fetal monitoring
- Medical management
- Pediatric heart disease - acquired
KENTUCKY CHILDREN’S HOSPITAL – PEDIATRICS

► SURGERY
GENERAL AND THORACIC SURGERY

JOSEPH A. IOCONO, MD, MBA, FACS
Chief, Division of Pediatric Surgery

The general and thoracic surgeons in the Division of Pediatric Surgery provide diagnostic evaluation and treatment for neonates, infants, children and adolescents with congenital anomalies and acquired conditions of the head and neck, chest wall and thorax, abdomen, gastrointestinal tract, and extremities. Special services and facilities include a Neonatal Intensive Care Unit, a Level I Trauma Center and a Burn Center.

SPECIALTIES

• Abdominal surgery
• Endoscopy
• Gastrointestinal problems
• Head and neck surgery
• Hernias
• Laparoscopic/minimally invasive surgery
• Newborn surgery
• Oncology
• Thoracic surgery
• Trauma surgery

The Pediatric Kidney Transplant surgeons at Kentucky Children’s Hospital work with the physicians and staff of UK HealthCare’s Transplant Center to provide kidney transplantation for children that meet the criteria. The UK Transplant Center has been providing transplantation services since 1964 and is now performing more than 130 transplants each year.

Our transplant physicians, nurses and clinic staff bring extensive expertise to treat and support the needs of this special group of patients. To ensure the highest level of collaborative effort, the transplant team provides continual feedback, pre-transplantation to post-transplantation, to the referring physician regarding each patient’s plan of care.

Outpatient evaluation and management of organ disease takes place in the Transplant Center. To facilitate access to the clinic, the Transplant Center covers parking costs for transplant patients.

**Living Kidney Donor Transplantation**

In recent years, there has been an increased demand for kidney transplantation resulting in expansion of the living kidney donation. About 45 percent of kidney transplants in the United States now come from living donors. The living donor program offers potential advantages for the recipient:

- Reduced waiting times
- Early referral could mean avoiding dialysis
- More likely to function better from the beginning and last longer

**Physicians**

HENRY C. VASCONEZ, MD, FACS
William S. Farish, Endowed Chair, Chief, Division of Plastic Surgery

At Kentucky Children’s Hospital, pediatric surgeons from the Division of Plastic Surgery utilize the most advanced procedures and technology to provide comprehensive diagnostic and treatment services for congenital and developmental anomalies of the head, neck and hand. Our fellowship trained pediatric plastic surgeons have vast experience treating children with a wide variety of plastic surgical issues. We also offer a full range of reconstructive and cosmetic surgeries such as ear, nose and breast procedures. With a 20-year reputation as the comprehensive craniofacial anomalies clinic in Kentucky, our reputation has brought families to us from across the Commonwealth, seeking our expertise and treatment.

MISSION STATEMENT
Pediatric plastic surgery specifically focuses on addressing the unique issues that can accompany plastic surgery in the pediatric population. Children are in a state of constant growth, and this developmental process requires different surgical approaches than would be utilized on an adult population. Our pediatric plastic surgeons understand that no two children are exactly alike, and we treat all of our patients with this in mind, paying close attention to the details and particularities that make each child unique.

PHYSICIANS
Anil M. Duggal, MD
James Y. Liau, MD, FACS
Brian D. Rinker, MD, FACS
Daniel H. Stewart, MD, FACS
Henry C. Vasconez, MD, FACS

• Cleft palate
• Ear-shape deformities
• Hand and foot deformities
• Moles and birthmarks
• Orthognathic (jaw and upper jaw problems)
• Skull shape anomalies
• Vascular anomalies (hemangiomas, vascular malformations)
PEDIATRIC PLASTIC SURGERY SPECIALTY SERVICES

Craniofacial Services
As the only comprehensive craniofacial anomalies clinic in Kentucky, our highly trained physicians employ a multidisciplinary approach to treating patients with craniofacial anomalies and birth defects of the skull and face. The team of caregivers includes plastic surgeons, pediatricians, radiologists, pediatric anesthesiologists, ophthalmologists, orthodontists, otolaryngologists, psychologists, pulmonologists and social workers whose combined efforts provide comprehensive care for children with craniofacial reconstruction.

Hand Surgery
Hand surgery and hand injuries are handled by our pediatric plastic surgeons. The scope of our practice includes the treatment of simple birth differences and complex congenital and acquired problems, such as peripheral nerve compressive syndromes and replantation.

Prenatal Counseling
Many congenital differences can be detected early with prenatal ultrasounds. Our prenatal counseling services help parents and families understand what to expect after the birth of their child and the possible treatment options. Congenital differences can be lifelong issues. It is never too early to begin discussion and proper planning.

Pediatric Plastic Surgery
Children can be born with ear, nose, breast, hand, foot and birthmark differentiation. These differences can also be acquired through traumatic injuries, cancers and other medical problems. As pediatric plastic surgeons, reconstructing and returning these differences to a more normal state is our primary objective. We understand that these differences can be difficult, so we strive to approach reconstruction with the sensitivity and individual care that each patient deserves.
The Department of Urology provides diagnostic and surgical services for children, including hypospadias, hyponephrosis bladder, urinary and genitalia disorders. UK HealthCare has a dedicated pediatric urologist treating patients up to the age of 18. The specialist performs genitourinary reconstruction and treats common conditions and diseases that are either present at birth or developed during the growth of a child. Treatment covers the male reproductive tract, and male and female urinary tracts.

**SPECIALTIES**
- Abnormally located urethral opening (hypospadias)
- Backup of urine from the bladder into the ureter (vesicoureteral reflux)
- Bedwetting (nocturnal enuresis)
- Distention of the kidney while in the womb (antenatal hydronephrosis)
- Renal anomalies
- Renal trauma
- Spinal defects such as spina bifida
- Tumors of the kidney or bladder
- Undescended testicles
- Urinary reflux
- Urinary tract infections (UTI)

**SERVICES**
- Blood tests
- Cystometrogram
- Cystoscopy
- Intravenous
- Magnetic resonance imaging (MRI)
- Renal scan
- Ultrasound
- Urinalysis and urine culture
- Urodynamic studies
- Uroflowmetry
- Voiding cystourethrogram
